

Freestyle Pro™

Split-adjustable Mechanical Gaming Keyboard

Overview

MSRP: \$179.99

Kinesis® has been the leader in computer ergonomics for more than two decades. In response to popular demand, Kinesis has developed the first split-adjustable mechanical keyboard built for gamers. The Freestyle Pro™ combines the award-winning fully adjustable Freestyle® design with enthusiast-grade components and fully-programmable firmware to deliver maximum performance and reliability for hardcore gamers.

Fully Customizable for Both Gaming and Office Use

The Freestyle Pro™ is the world's first 2-in-1 keyboard. By day the Freestyle Pro™ is a fully-adjustable split keyboard that enables maximum typing comfort and productivity through an infinite variety of physical and electronic configurations. By night, swivel the right keypad out of the way and use the left keypad as a compact backlit gamepad, maximizing space for mouse movements and keeping your right arm in a more natural position.

Office Configurations

Game Configuration

Freestyle Pro™

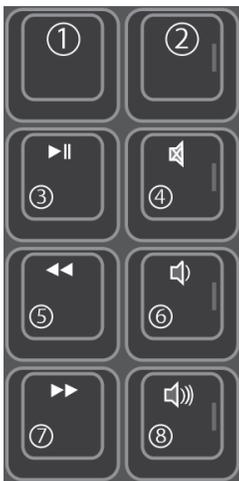

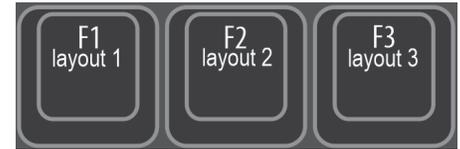

100% Cherry® MX Red Mechanical Key Switches & LED Backlighting

Cherry® MX Red key switches have a lower actuation force (45cN), linear feel and super fast response time for gamers who demand maximum speed, control and durability. Brilliant white LED's individually illuminate each key with adjustable brightness (3 levels). High-contrast, laser-etched keycaps with UV clear coat deliver maximum visibility in dark and light environments.

Driverless & Fully Programmable, Assign Macros to Any Key

Remap keys, build custom macros and more using Kinesis's custom driverless onboard programming. Quickly toggle between 3 active layouts (each with two layers) and save additional layouts in the keyboard's onboard memory. Map keys from the right keypad to the left for an optimal gaming layout.

8 Dedicated Game and Media Keys

A bank of 8 programmable Game Keys is conveniently located in a 2x4 arrangement on the left side of the keyboard. Program your favorite macros, bind frequently used keys or just leave them as one-touch media controls. It's your choice and they're always within easy reach.

Removable Palm Rests & Lifter Accessories

Customize your Freestyle Pro™ for maximum comfort so you can outlast the competition. Removable palm rests keep your wrists supported. Replaceable palm pads made from closed cell foam offer an unparalleled soft, gel-like feel. Optional lifter accessories allow tenting slopes of 5, 10 or 15 degrees to keep your wrists rotated at a natural angle.

Compact Tenkeyless Design with Standard Key Layout

Stop turning your keyboard at an awkward angle. With or without the right keypad there is less space between the WASD keys and your mouse than on a conventional keyboard. This configuration reduces neck, shoulder and forearm strain meaning you can play longer and take fewer breaks. LAN parties are no problem for the Freestyle Pro™, just fold-and-go. And with a standard key layout there is no learning curve.

Other Features

- 6KRO over USB
- 1ms response time
- Windows Lock Key
- 32-bit Atmel® Processor
- Plate-mounted PCB

Freestyle Pro™ is a game changer!
